

Salary Process Flow in FixHR (Automatic & Manual Mode)

Payroll Mode Setting

The choice between Automatic or Manual Payroll is defined at the start of the Payroll Period.

Set During Payroll Period Creation:

- When creating a new payroll period (e.g., September 2025), the admin selects Automatic Mode or Manual Mode. This setting cannot be changed once the payroll period is opened.

1. Automatic Payroll Mode

Definition: Fully system-driven, no manual changes allowed.

- Payroll Period Created: Admin sets mode to Automatic.
- System Auto-Calculates: Uses attendance, shift, overtime, and pre-configured rules.
- Payslips Generated (Draft): Salaries computed automatically.
- Admin Review: Admin can review but cannot edit salary figures.
- Payroll Locked: After confirmation, payroll is locked. Reports and payslips are generated.
- Final Payout: System-generated data used for Bank transfers, Reports, and Statutory filings.

2. Manual Payroll Mode

Definition: System calculates salaries, but HR/Admin can manually override entries during the open payroll period.

- Payroll Period Created: Admin sets mode to Manual.
- System Auto-Calculates (Base): Fetches data from attendance, leave, shifts, etc.
- Manual Override Allowed: HR/Admin can change salary components like PF, ESIC NET SALARY, Adjustments, Overtime corrections (only for current period).
- Edit Logs Maintained: Every manual entry is tracked (who, what, why).
- No Impact on Reports: Reports/statutory forms use system-calculated values only. Manual edits apply only to payment and payslip display.
- Payroll Locked: Once finalized, no further edits. Payslips show final (manual-adjusted) amounts.

Summary Table: Payroll Modes

Feature	Automatic Mode	Manual Mode
Set during payroll creation	Yes	Yes
System-based calculations	Yes	Yes
Manual edits allowed	No	Yes (this period only)
Edit logs maintained	Not Applicable	Yes
Affects reports/statutory data	Yes	No
Can change after payroll starts	No	No
